

VICTOR CORNEJO

San Francisco, CA 94117

(408) · 752 · 1590 ◊ victor.cornejo@berkeley.edu ◊

EDUCATION

University of California, Berkeley

Class of '23

B.A. in Cognitive Science

Minor in Data Science

Cumulative GPA: 3.4

EXPERIENCE

Expedia Group - Contractor

November 2024 – Present

Data Analyst II, Traveler Voice and Content

Remote, CA

- Assisted in the evaluation of LLM-generated travel content across multiple domains, designing structured annotation workflows to assess semantic fidelity and representation in LLM-generated content.
- Created category-level taxonomies and labeling strategies to detect changes in syntax, tone, and factuality between GenAI outputs.
- Assembled scalable analysis notebooks in Databricks to surface unknown or emerging trends and patterns using clustering, embedding, and GPT-aided analysis
- Applied advanced data tooling (PySpark, Python, SQL) to track edit types, visualize semantic drifts, and calibrate labeling pipelines in LLM response evaluations.
- Generated reports based on the analysis findings, published across team sites on Confluence, and presented the findings to stakeholders on KPIs

Meta - Contractor

August 2023 – November 2024

Data Labeling Analyst

Remote, CA

- Aided Language Engineers in conducting quality risk testing and content risk reports with their virtual assistant Meta AI on a red teaming project.
- Interacted with multiple agent personas under multiple legal categories and attack vectors, intending to break the agent and receive violating answers. That same produced data is labeled accordingly and then used to improve multiple Llamas within Meta.
- I also ought to write daily reports based on the daily findings annotated in spreadsheets to analyze as a team during daily meetings.

XR Lab @ UC Berkeley

June 2023 - August 2023

Perception Engineer Assistant

Berkeley, CA

- Assisted in the experimental design of VR/AR environments to be used in experimental testing aiming to understand memory and attention through spatial computing.
- Provide the engineering team with a theoretical framework of human perception and its applications within human-computer interactions.
- For this project I collaborated with research being done at the XR lab, where we designed a conceptual divide that would allow us to carve our surroundings with the aid of lidar and photogrammetry. The device would contain an eye tracker that would translate the gaze position into a point within the VR environment at the same time so we could then predict regional attention and biases.

Whitney Lab for Perception and Action

April 2022 - August 2023

Research Assistant

Berkeley, CA

- Assist in the experimental design and implementation of research investigating the sequential effects of emotion in visual perception.
- Conduct data collection procedures on participants and apply statistical methodologies to analyze and interpret data using Python libraries and PsychoPy.
- Prepare comprehensive research reports and data visualizations summarizing findings and present them to the team for review and collaboration.

- Perform thorough literature reviews to establish a strong theoretical framework for research methodologies through existing theories.

Apple - Contractor

February 2020 - December 2020

Data Annotator

Cupertino, CA

- Conducted Quality Assurance (QA) testing reports and graded the accuracy of the virtual assistant on Siri Projects.
- Tested software recognition in ROIs and Image to Text Models.

Apple - Contractor

March 2019 – July 2019

Linguist Specialist

San Jose, CA

- Worked on a Siri Project to grade the accuracy of the virtual assistant in understanding utterances from users in the LATAM region.
- I provided expertise in the lexicon from diverse regions across Latin America to then model the agent's response in a proper manner and language use. Overall, I contributed valuable insights into the project.

SKILLS

Computer Languages

HTML, C++, JavaScript, Python

Databases

PySpark, Python, SQL, Scheme, R-Studio

Python Libraries

NumPy, Matplotlib, Pandas, Seaborn, SciPy, Xarray

Creative

Figma, Adobe Creative Suite, Blender, Unity, Touch Designer

Tools

Confluence, Miro, Microsoft Office, WordPress, Google Analytics, PsychoPy

Spoken Languages

Spanish, English, French
